Available in Black or White

The Pure P15S, a compact subwoofer

The Pure P15S is the bass extension for the P10 and P12 and comes with the M20 top hat mount to let you pole mount the speakers. Still compact, and as you would expect, it has a broader frequency response than the P12S and P10S at higher SPL. Standard black and white, but you get optional other colours on request.

For the best sound quality and phase coherence pair with the Aaron B DSP and amplifier solution. The flexible P15S subwoofer speaker deploys discretely in many applications, including but not limited to nightclubs, bars, mobile DJ set-ups, houses of worship, corporate AV and live music performances. It's an ideal speaker for both portable and installed sound applications.
