Available in Black or White

The PURE P6, a passive two way system

The smallest speaker in the Pure Series, the P6, is compact and can be tucked discreetly into a small space. The flexible, adaptable mounting system gives you plenty of options – hang it from the ceiling, attach it to a rear wall or mount it on a truss. Black and white are standard colour options, contact us for others.

This compact speaker gives you high quality and detail at lower volumes, makes it the perfect choice for Houses of Worship, theatres, corporate AV systems, leisure and commercial premises.

You can run eight of these speakers from one amp channel giving you a cost-effective installation for your budget.

Do you want a full range system in a small space? The Aaron B range is designed to allow you to add in the Pure Series P10S subwoofer to give you the ideal bass extension. They are phase coherent with perfect crossover points but for the complete package, you want the Aaron B DSP and Amplifier.

User-friendly Passive two way speakers that fit anywhere and perform, not just well but superbly well.
